Multi-socket Stand-by Saver

Multi-socket Standby Saver for TV's, Videos, DVD's etc - Price from Trust = £15.00 (RRP £21.99)

The unique Standby Saver cuts 100% of the standby power to any appliance plugged into it. Standby Saver is a 6-way energy saving extension socket, which allows the user to 'switch off' and eliminate standby power consumption, for up to six appliances. It has two by-pass sockets for 'on-all-the-time' devices. **Standby Saver is available in two versions: the IR version** for use with TV, DVD, VCR, amplifiers and games consoles etc. and the **USB version** for use with PCs, laptops and associated peripherals.

SPECIFY WHICH UNIT YOU REQUIRE - IR or USB

Standby Saver Compact (one socket) - Price from Trust = £12.00 (RRP £16.99)

Use with TVs and related AV equipment, eg TVs, DVD players, videos, games consoles, Freeview, Sky, stereo, lamps etc.

Simply teach the Standby Saver Compact an on and off command from your existing remote control. You can now switch anything plugged in the Standby Saver Compact on or off, with the single press of a button.

Infra-red technology

Simple to install

Saves 100% of standby power

Use with your existing remote control

Use with any multi-socket adapters to increase the number of sockets and savings

Energy Wizard - Plugs into any spare electricity socket & cuts energy costs by around 10%. Price from Trust = £19.00 (RRP £29.99)

The Energy Wizard should save over £60 per year in the

average household, based on 10% electricity saving with an average annual UK electricity bill of £600. It works by optimising the voltage and current demands, using a combination of filtration and correction techniques. As a result it achieves **over 10% savings off your electricity bill.**

An Independent Regulatory Compliance Laboratory has verified these savings and results showed that when the Energy Wizard was used, 12.6% was saved in energy costs.

Energy Monitor - Price from Trust = £20 (RRP £26.99)

Saves £££ by showing which items are the heaviest users of electricity in your home.

Plug the Monitor into your wall socket.

Plug your appliance into the Monitor insert the rate you are paying for electricity from your electricity bill and calculate how much money the selected appliance costs to run.
